Police Association of Ontario
Via email: info@policehero.ca

Nomination: Police Services Hero of the Year Award
Nominee: Ottawa Police Service Constable (Detective) Helen Grus
Category: Police Hero Honour Roll Award

I, Dmitry Gorodnichy, nominate Ottawa Police Constable (Detective) Helen Grus for the Police Association of Ontario 'Police Hero Honour Roll Award'.

I first heard about Detective Grus in the spring of 2022 in relation to her efforts to find out the cause of a cluster of unexpected infant deaths that happened in Ottawa in January 2022.

I am a data scientist by training myself (Ph.D. in Math and Ph.D. in Comp. Sci) with over twenty years of experience working with the Government of Canada, focusing my work on performance evaluation of various industry/vendor products in security applications.

One of the key lessons I've learned from my work is that one should never assume that claims of any vendor related to the performance of their products are always true. Also, it is often the case that vendors will invest a lot of their business revenue (the richer the company, the more the investment) into advertising and controlling the narratives related to their product. And it does not matter in which industry field (security or pharma) - This is just the way business works. And this is also exactly why the products of all vendors must be independently tested and positions like mine exist.

When I heard that there is not just one or two but many unexpected sudden deaths happening in January 2022, it clearly indicated to me that there must be a common cause for these deaths. What could this cause be?

According to PHAC data, the percentage of COVID deaths among children and infants is extremely rare (Annex B). Hence, the cause of the increase in sudden infant deaths observed in January 2022 was more likely than not related to something else.

What else could it be? What was common among all unexpectedly deceased infants?

The answer to this question should be clear to anyone who hears about this story - it is the vaccination, because it started exactly when the mothers of these children were pregnant, unless and only unless this fact is ruled out by empirical validation. Evidently, this is exactly what Detective Grus attempted to investigate - the action that should be seen as the most natural and most responsible action for a detective officer.

By that time, it was already known that certain COVID vaccine batches and products were considerably worse than others, and several resulted in premature sudden deaths. Several pieces of evidence related to this fact are listed below, with more provided in Annex B:

1) AstraZeneca has already been removed from the market in the UK and other countries as not meeting the originally made safety claims:

<https://www.aljazeera.com/news/2021/3/15/which-countries-have-halted-use-of-astrazenecas-covid-vaccine> (retrieved: 17 march 2024)

2) There was at least one Canadian child whose sudden death has been forensically confirmed as caused by the COVID vaccine: <https://twitter.com/Answers4Sean> (<https://www.lifesitenews.com/news/canadian-dad-says-us-doctor-confirmed-his-17-year-old-son-was-killed-by-the-covid-vaccine/>).

3) The site <https://knollfrank.github.io/HowBadIsMyBatch/batchCodes.html> shows that the mortality rates of COVID vaccines vary dramatically among various batches and products based on the data in the Vaccine Adverse Event Reporting System (VAERS).

If any of COVID vaccine batches and products resulted in deaths of children, these must be immediately investigated. However, there was no such investigation conducted anywhere in Canada, to the best of my knowledge, except for the one attempted by Detective Grus.

Instead of calling for more public investigation of the tragic deaths and applauding the efforts of Detective Grus to find the cause of tragic infant deaths, CBC and other mainstream media have evidently made an objective to disregard the concerns expressed by Detective Grus and smear her efforts and her reputation. One could reasonably ask if such media outlets and anyone who impeded conducting the much-needed investigation into vaccine possible safety concerns were influenced (either directly or indirectly) by vendors of these vaccines whose safety issues Detective Grus was trying to investigate?

All this is stated here to explain why I felt so much interest in learning about Detective Grus and her case against the allegations of 'Discreditable Conduct' for "initiating an unauthorized criminal investigation" into a cluster of unexplained infant deaths in the Ottawa area covered by CBC. And the more I learnt about her, and this case, the more I see how truly remarkable she has been as a Police officer throughout her career, including and especially in the last three years as she - fighting for truth, for democracy, for the lives of our children and all of us. To me, and thousands of other Canadians, she is a true hero - a Canadian police officer, the entire nation can be proud of.

Below (Annex A), I append a list of facts related to Detective Grus's nomination, which I know have been already provided to you by Donald Best, a former Sergeant (Detective) with the Toronto Police responsible for investigating Canadian police, lawyers, and politicians involved in organized crime, and a leading Canadian anti-corruption whistleblower and activist.

In addition to that, I'd like to add additional evidence (Annex B), which I have collected myself, as a data scientist and concerned citizen, which further proves that allegations of Detective Grus's "discreditable conduct" are politically motivated and aim at silencing forensic investigation related to the safety of vaccines.

To conclude this nomination submission, I'd like to echo statements made by Donald Best and many other Canadians to nomination of Detective Grus for the Police Association of Ontario 'Police Hero Honour Roll Award', which should be evident to anyone looking objectively into Detective Grus files:

- Throughout all her career in Police Detective Grus provided exemplary service, has exceeded expectations on all of her performance reports, is due for promotion to Sergeant, and has shown valour and dedication to the Ottawa Police, to the community, and to preserving life.
- Detective Helen Grus is an outstanding police officer and is surely worthy of the Police Association of Ontario 'Police Hero Honour Roll Award'
- All efforts to smear the reputation of Detective Grus are purely politically motivated.

I would be glad to provide any testimonials and clarifications related to anything provided in this letter, including in Annex B.

Sincerely

Dmitry Gorodnichy

Cc. Donald Best

This nomination letter will be made public on my Community Support pages: www.IVIM.ca

Annex A: Excerpts from the Helen Grus “Police Services Hero of the Year Award” nomination by former Police Detective Donald Best

Source: <https://donaldbest.ca/nominate-detective-helen-grus-for-police-hero-of-the-year/>
(retrieved: 17 March 2024)

Detective Grus (Badge #1631) is now assigned to the Robbery Squad. In each posting throughout her 21-year career Helen Grus has shown exceptional dedication and diligence in her duties, as well as outstanding leadership qualities and commitment to the community. Detective Grus has been praised for her concern for victims that “exceeds all expectations”. She is “a revered investigator” – all of which her supervisors noted in her annual performance reviews to 2021. (The last annual review that is publicly available). (1)

In 2016, Detective Grus was assigned to the Sexual Assault and Child Abuse Unit (SACA). Her 2021 performance review reads in part:

“Detective Grus is a dedicated employee who puts her victims’ needs above herself. Detective Grus is well-versed in her role as an investigator in SACA. Being one of the most senior officers in the unit, Detective Grus is a wealth of knowledge and does not hesitate to assist or provide guidance to others...”

Detective Grus is a revered investigator in SACA, and has a large resume of experience. I would encourage Detective Grus to use these abilities and knowledge to pursue a promotion and/or other career aspirations. SACA is lucky to have such a skilled interviewer and investigator...”

Detective Grus also volunteers to assist with adult pre-charge diversion program, due to extensive experience in this realm. She dedicates a lot of her own time for this cause and maintains great contacts with our stakeholders in the community to assist with that liaison between us and our community partners...”

Detective Grus does not hesitate to volunteer for new files, as well as complex ones, and Detective Grus works well in a team and demonstrates her abilities on a daily basis. Detective Grus was assigned some stranger sexual assaults of sex trade workers and collaborated with other Detectives to establish possible connections between their assigned files...”

Detective Grus is very personable and works with a smile.... Detective Grus makes our clients really comfortable with the process, as well as with our organization as a whole...”

Detective Grus is well respected amongst her peers in SACA for her knowledge and abilities. She continues to mentor junior officers and does not hesitate to break away from her files to assist with others...”

Detective Grus has a huge sense of team working towards a similar goal to provide the best service we can for our clients... Detective Grus is self-sufficient and does not require close supervision...”

As one example of the hundreds of investigations that Detective Grus self-initiated during her career – in 2017 Detective Grus initiated an investigation into an unsolved historical sex assault upon a child.

Like all Canadian police officers Detective Grus was and is authorized by law and her Oath of Office to self-initiate any investigation without notifying her supervisors or seeking their permission or direction. This is because Canada empowers each police officer to act with powerful self-autonomy compared with many other countries – to ensure that police officers and their investigations are protected from political influence and corruption.

In the 2017 case, Detective Grus examined confidential police files and began to suspect and gather evidence against Timothy Sample, a 56-year-old Personal Support Worker.

As a direct result of Detective Grus's initiative, diligence, and exceptional investigative and interviewing skills, Timothy Sample was charged and convicted of sexually assaulting a young girl over a four-year period starting when she was 8 years old. The details of the case and Detective Grus' role were published in the Ottawa Citizen June 6, 2019 article 'PSW monster jailed for another child-sex crime'. (3)

The above is more than sufficient reason for the Police Association of Ontario to honour Detective Helen Grus with the 2024 'Police Hero Honour Roll Award'.

There are, however, additional circumstances to further show that Detective Helen Grus acts with professional and personal integrity, with diligence, with moral courage, and with a firm commitment to her duty and her Police Oath of Office.

Detective Grus is currently defending against an internal disciplinary charge of 'Discreditable Conduct' for "initiating an unauthorized criminal investigation" into a cluster of unexplained infant deaths in the Ottawa area. She is charged with self-initiating an investigation – exactly as she did and was praised for in the 2017 Timothy Sample case.

Detective Grus's current circumstances are critical to policing in Canada because the final outcome will determine whether or not individual Canadian Police Officers have the authority and duty to self-initiate investigations – or whether they must first seek permission and political approval.

Like every other Canadian Police Officer with two decades of service, Detective Grus has self-initiated hundreds of major and minor investigations during her career – without first seeking permission or notifying other officers.

The difference this time is that the cluster of sudden, unexplained infant deaths is a political hotcake, where Public Health Agency of Canada personnel are proven to have contacted and influenced the Ottawa Police – first during the internal investigation into Detective Grus, and again after Professional Standards charged Detective Grus and she was appearing before a Tribunal.

As Detective Grus defends against the politically motivated charge, she also defends the right and duty of every Canadian police officer to self-initiate investigations without first seeking permission or having to bend to political influences.

...

Despite over two years of intimidation and sanctions, Detective Helen Grus continues to defend the right and duty of every Canadian Police Officer to do their duty and uphold their oath of office without political interference.

...

On February 4, 2022, Detective Grus was suspended for allegedly printing out a coroner's report and for looking in the police files of sudden infant deaths. This suspension was based on a charge of insubordination and specifically for allegedly breaching an internal policy on the use of a police database of records which cannot be used for personal reasons.

The charge was later dropped as there was no evidence against Detective Grus because she was in fact, simply doing her job.

...

The Tribunal against Detective Grus heard evidence that police officers from the Professional Standards Unit called nine families on March 25, 2022 to inform them that Detective Grus had committed a privacy breach – when in fact she had not. All this information was extremely sensitive, confidential, and subject to the Oath of Secrecy per the Police Services Act.

It is evident that the police officers involved in leaking the information to the CBC were working with CBC to defame Detective Grus, to ruin her reputation publicly, and to fabricate evidence for a discreditable conduct charge.

On March 28, 2022 and March 31, 2022, Yogaretnam and the CBC published two articles and broadcast a radio show about Detective Helen Grus – shamelessly defaming an outstanding police officer of the Ottawa Police Service, interfering with an internal police investigation, upsetting families who lost their infants, and breaching the sacred oath of confidentiality.

...

The Ottawa Police Professional Standards Unit refused Detective Grus's written demand to launch a criminal investigation to determine the identities of the rogue officers who unlawfully provided confidential police information to the CBC. Instead, the Professional Standards Unit blamed Detective Grus for the embarrassment to the Ottawa Police and went on to charge Detective Grus with discreditable conduct "for bringing the reputation of the Ottawa Police Service into disrepute." (2)

On May 12, 2022, Professional Standards investigators formally interviewed Detective Grus in a 'compelled interview'. During the recorded interview (which was publicly played at the ongoing Tribunal Disciplinary Hearing), Detective Grus provided the Professional Standards investigators with documented evidence, including clinical studies on the Covid-19 vaccinations.

The clinical reports included some of the 'Pfizer Documents' that showed Pfizer knew that the experimental mRNA COVID vaccinations killed and injured babies in the womb – and the fact that the clinical trials did not include testing on pregnant and breastfeeding women as clinical subjects, it just so happened that some of the clinical subjects were pregnant at the time, and all those that the researchers followed up with had lost their babies after taking the Covid-19 vaccination. (2)

Other evidence included an affidavit of an Expert Witness Medical Doctor about the dangers to breastfeeding infants of mRNA injected mothers.

In her interview, Detective Grus mentioned that she believed that there were reasonable and probable grounds of criminality, as these clinical studies were provided to Public Health Agency Canada, and yet PHAC went on to state that the Covid-19 vaccinations were safe for pregnant and breastfeeding women, contrary to the data indicating that they were in fact potentially lethal. (2)

The Professional Standards officers who received this criminal investigation file and evidence did not initiate an investigation and are in Neglect of Duty under the Police Services Act of Ontario – in my professional opinion as a former Toronto Police Sergeant (Detective). **This neglect is just another indication of the political motivation for the charge against Detective Grus.**

...

It is clear from the evidence presented at the Tribunal thus far, that Detective Grus is being vilified and punished for asking difficult questions, and for looking into the criminal occurrence of the decision to mandate the Covid-19 vaccination for pregnant and breastfeeding women when it was not safe to do so – and has possibly contributed to the deaths of infants.

The charge against Detective Grus is also intended to deter her and other police officers from initiating criminal investigations into the manufacture, testing, approval, procurement, and mandating of the experimental mRNA COVID vaccinations – including deterring investigations into any potential injuries and deaths.

In October 2022, the Ottawa Police ordered Detective Grus to report to the Robbery Squad to work, but with conditions to stay away from the Sexual Assault and Child Abuse Unit. Detective Grus continues to fulfill her duties and oath of office with dedication and diligence.

Even though Detective Helen Grus faces an ongoing legal battle that is politically motivated, she maintains her loyalty and dedication to her profession and to the Ottawa Police Service.

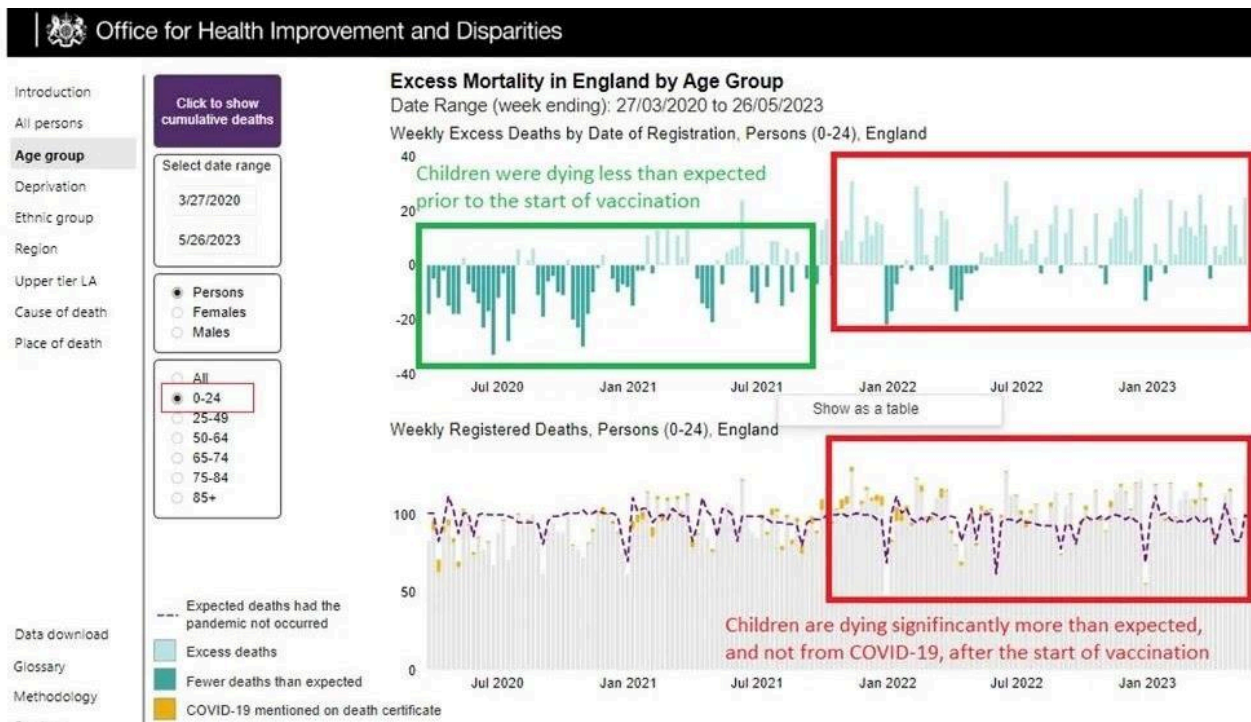

Detective Grus has provided exemplary service, has exceeded expectations on all of her performance reports, is due for promotion to Sergeant, and has shown valour and dedication to the Ottawa Police, to the community, and to preserving life.

Detective Helen Grus is an outstanding police officer and is surely worthy of the Police Association of Ontario 'Police Hero Honour Roll Award'.

Annex B: Further Evidence of Politically Motivated Allegations Against Detective Grus, Intended to Suppress Public Debate and Vaccine Safety Investigations

Below are additional pieces of evidence (Evidence 1-7), in addition to those quoted in Annex A, which I have personally gathered as a data scientist and concerned citizen. These pieces of evidence further substantiate the claim that the allegations of Detective Grus's "discreditable conduct" are politically motivated and intended to suppress public debate and forensic investigation concerning the safety versus necessity of COVID-19 vaccines.

Evidence 1: There has been a notable increase in the deaths of young people coinciding with the start of the COVID-19 vaccination for this population (Fall 2021) in Canada and other countries. There was no increase of death in this age population prior to the start of the COVID-19 vaccination for this population (Spring 2020-Fall 2021).

It is with profound sadness that we announce the passing of Scott Wheeler. Born August 15, 1963, Scott found peace on February 21, 2024 at the age of 60, after a long, bravely fought battle with a complex, progressive autoimmune disorder as a result of injury from the Covid-19 vaccines. Scott was a true warrior

Evidence 4: There were over a hundred unexpected sudden deaths among Canadian children reported across the country in the winter of 2021-2022 that were not attributed to COVID or any of the factors listed by Statistics Canada. None of these tragedies has been mentioned in mainstream media, which typically emphasizes every single loss of life under the "each child matters" slogan.

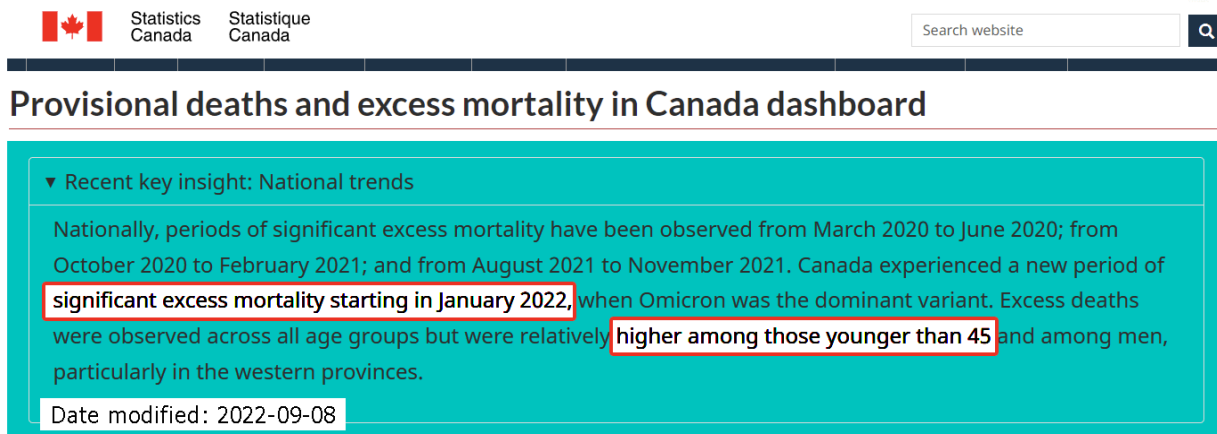

whocantellmethetruth.ca

[Additional stories and testimonials](#)

- The image above, taken from www.whocantellmethetruth.ca, shows a sample of just eighty photographs of children who unexpectedly died in winter 2021/2022. None of these tragic deaths were reported in mainstream media or triggered a forensic investigation, despite the fact that many of them happened in similar circumstances following administration of COVID vaccines.
- There is also a list of well-known young athletes who died after receiving vaccinations, with many of these deaths being directly linked to heart failures due to myocarditis that is known to be one of the known adverse events of the mRNA vaccines: <https://www.globalresearch.ca/1323-athlete-cardiac-arrests-serious-issues-900-dead-after-covid-injection/5793730>.
- More listed at <https://ivim.substack.com/p/a-page-in-memory-of-canadians-who> and <https://ivim.substack.com/p/pco-memo-recommended-managing-covid>

Evidence 4: The data concerning the rise in the deaths of young Canadians starting from the end of 2021 was already available on the Statistics Canada data repository portal in January 2022. However, the publication of this "Key Insight" on the Statistics Canada Dashboard (Provisional deaths and excess mortality in Canada dashboard) was **delayed until September 2022, which is over half a year after this critical information was obtained.**

The screenshot shows the Statistics Canada logo and a search bar at the top. Below is the title "Provisional deaths and excess mortality in Canada dashboard". A teal box contains the following text:

▼ Recent key insight: National trends

Nationally, periods of significant excess mortality have been observed from March 2020 to June 2020; from October 2020 to February 2021; and from August 2021 to November 2021. Canada experienced a new period of **significant excess mortality starting in January 2022**, when Omicron was the dominant variant. Excess deaths were observed across all age groups but were relatively **higher among those younger than 45** and among men, particularly in the western provinces.

Date modified: 2022-09-08

Sources:

- Statistics Canada, Provisional weekly death counts, by age group and sex: <https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1310076801>. (Evidence 1)
- Statistics Canada, Provisional deaths and excess mortality in Canada dashboard: <https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm>
 - Until September 2022: no mentioning of increase of mortality among young starting in January 2022)
 - <https://web.archive.org/web/20220511035358/https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm> (11 May 2022)
 - web.archive.org does not provide reports between May and Sep 2022
 - From September 2022 to February 2023: mentions “*significant excess mortality starting in January 2022 [especially] among younger than 45*” linking it to “Omicron” (See image above)
 - <https://web.archive.org/web/20220914175724/https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm> (14 Sept 2022)
 - <https://web.archive.org/web/20230207052115/https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm> (7 Feb 2023),

I can personally confirm that the data related to the increase in deaths from “unknown cause” and the increase in deaths among young Canadians, starting from Fall 2021 have already been available on [Death Statistics published by the Statistics Canada](#) by January 2022 (for most provinces) and by March 2022 (for all provinces). I have observed it myself, along with

several other “anomalies” related to excess deaths and COVID-19 related deaths, which prompted me to contact the Office of the Chief Science Advisor (Dr. Mona Nemer) on April 14, 2022 and followed up on May 12, 2022, and Office of the Auditor General of Canada on April 8, 2022, and followed up on August 22, 2022. However, no response from either office was ever received.

For the reasons above, I’ve been following closely (weekly) Provisional deaths and excess mortality in Canada dashboard published by Statistics Canada (link above) and can testify, if needed, that indeed for the first time when Statistics Canada published in the Key Insight that *“Canada experienced a new period of significant excess mortality starting in January 2022... Excess deaths ... were relatively higher among those younger than 45...”* was in the second week of September 2022. Prior to that there was not a single mention of this concerning fact anywhere in official government pages.

Additional background:

In November 2021, while teaching Data Science tools to my Government of Canada colleagues, I helped to develop a *Open Canada Vital Statistics Tracker Web App* that visualizes [Vitals Statistics \(Deaths\) published by the Statistics Canada](#). This App was made publicly available at <https://open-canada.github.io/Apps/vitals> (mirror: <https://o-canada.shinyapps.io/vitals/>) and it made it easy to detect trends and anomalies related to excess and covid deaths in Canada.

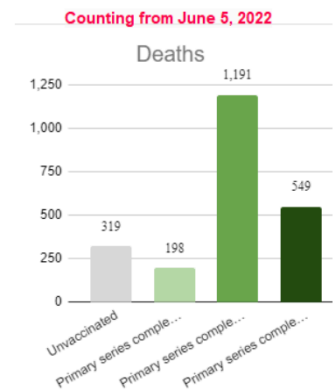

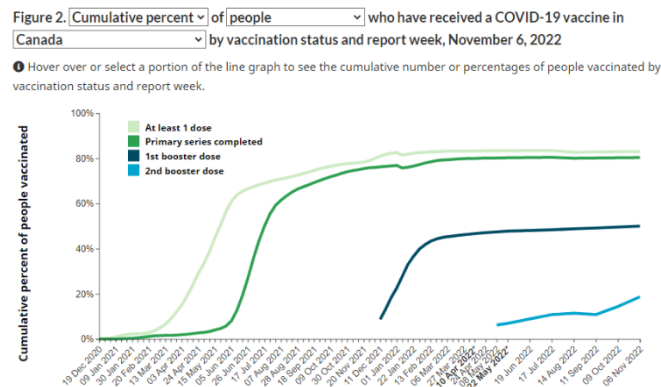

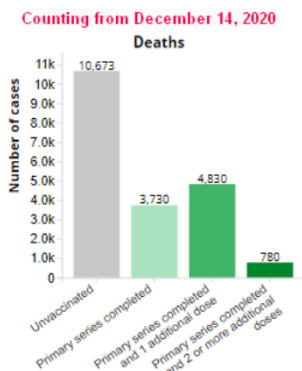

Evidence 5: Despite Evidence 2, 3 and 4, nowhere in any of its publications has Statistics Canada ever acknowledged (published) that one of the potential causes of *“significant excess mortality starting in January 2022 [especially] among younger”* could be attributed, at least among other factors, to the COVID-19 vaccine. Instead, when the information about *“significant excess mortality starting in January 2022 [especially] among younger”* was finally published in September 2022, it was published in such a way as to create a false association of these tragic excess deaths with COVID omicron infection, even though it was known not to be a factor (Evidence 2). Later, the wording has changed entirely to link these tragic excess deaths to multiple other factors (5 factors) such as *“delayed medical procedures”, “increased harms related to substance use”, “changes in the prevalence of other diseases and medical conditions”, “a heat dome”*, again with no mention that they could be related to COVID-19 vaccines, despite clear evidence suggesting such a possibility (Evidence 3 and 4).

- Statistics Canada, Provisional deaths and excess mortality in Canada dashboard: <https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm>
 - From March 2023: changed key insight related to *“significant excess mortality starting in January 2022 [especially] among younger than 45”* from being linked to “Omicron” (shown in Evidence 4) to

- <https://web.archive.org/web/20230319010633/https://www150.statcan.gc.ca/n1/pub/71-607-x/71-607-x2021028-eng.htm> (19 March 2023)

Evidence 6: The Public Health Agency of Canada (PHAC) published its 'Cases following vaccination' data, which holds paramount importance in justifying the necessity of COVID vaccines for all populations (COVID mandates). - This dataset presents the actual observed post-marketing performance of vaccines, in contrast to the advertised performance claimed by vendors prior to putting the vaccines on the Canadian market. However, in presenting this data, PHAC employed a "Data presentation technique" known in data science as "algorithmic bias." This technique skewed the data significantly (by over two orders of magnitude) in favour of vaccinated individuals by counting COVID cases that occurred before vaccine doses were administered.

When recalculated without "algorithmic bias" (i.e., counting cases only from the time when doses were administered), the data consistently failed to demonstrate that COVID-19 vaccines significantly reduced the risk of infection and/or complications from COVID-19, contrary to the claim used to justify vaccine mandates. Moreover, the data indicated that starting from Winter 2021-2022, COVID-19 was affecting vaccinated individuals more seriously than unvaccinated and partially vaccinated individuals.

Sources:

1. Public Health Agency of Canada (PHAC): COVID-19 epidemiology update: <https://health-infobase.canada.ca/covid-19/cases-following-vaccination.html>
2. COVID-19 vaccination coverage in Canada: <https://health-infobase.canada.ca/covid-19/vaccination-coverage/archive/2022-07-22/index.html>
3. Data tracking and analysis (image above): <https://sites.google.com/view/open-canada/dashboard/cases-following-vaccination>
4. Full analysis: <https://opencanada.substack.com/p/how-government-manipulates-data>

Evidence 7: In June 2023, two years after the reported event, a secret Privy Council Office memo surfaced following an Access to Information and Privacy (ATIP) request. This memo, conveyed to the Prime Minister in May 2021, five months after the vaccine rollout in Canada, listed 20,428 reports of "serious adverse events," including 427 deaths, and recommended "managing COVID vaccine-related injuries or deaths with winning communication strategies" to "avoid undermining public confidence." This memo utilized the term "**Winning Communication Strategies**" to suggest the use of data-skewing practices aimed at concealing the truth from Canadians regarding the detrimental effects of COVID vaccines and provided an example of *"data presentation technique that skewed the messaging towards the desired narrative"*

Source:

- Blacklock's Reporter - Wanted 'Winning Messages' On Vax Injury: Secret Memo, June 6, 2023:
<https://www.blacklocks.ca/wanted-winning-messages-on-vax-injury-secret-memo/>
- Toronto Sun - Privy Council advocated downplaying COVID vaccine injuries or deaths. The Privy Council memo was obtained under Access to Information. Published Jun 06, 2023:
<https://torontosun.com/news/national/privy-council-advocated-downplaying-covid-vaccine-injuries-or-deaths>.
- Analysis: <https://ivim.substack.com/p/pco-memo-recommended-managing-covid>

Based on the evidence presented in this annex, the following examples of "Winning Communication Strategies" have been enacted in Canada with the intention of stifling open debate, democratic transparency, and forensic investigation related to the safety versus necessity of COVID vaccines:

1. Not publishing or delaying the publication of inconvenient data (Evidence 4)
2. Attributing excess deaths among young Canadians after vaccination to numerous causes, excluding those related to vaccine mandates and vaccine quality, as seen in the 'Excess mortality dashboard' published by Statistics Canada (Evidence 5)
3. Skewing the data in favour of desired outcome, as seen in the reporting of 'Cases following vaccination' by the Public Health Agency of Canada (Evidence 6)
