## Public Health Agency of Canada

(a) how many COVID-19 vaccines has Canada (i) procured, (ii) had delivered, since the pandemic was declared over on May 5, 2023, in total and broken down by supplier?

From May 5, 2023, to March 31, 2025, 33,463,130 doses of COVID-19 vaccine were delivered to Canada and 31,488,380 were distributed to federal, provincial and territorial partners. Below is the breakdown by manufacturer:

Manufacturer	Doses of vaccine delivered to Canada	Doses of vaccine distributed
Pfizer	20,064,480	18,817,210
Moderna	13,248,650	12,609,400
Novavax	150,000	61,770

The Public Health Agency of Canada is unable to disclose the total number of doses of vaccine procured by supplier, as the information is commercially sensitive and protected under confidentiality clauses in the vaccine supply contracts between manufacturers and the Government of Canada.

(b) how many vaccines have been ordered but not yet delivered, in total and broken down by supplier?

The federal procurement of COVID-19 doses concluded in fiscal year 2024-2025. There are no further federally procured doses of COVID-19 vaccines pending delivery to Canada or delivery within Canada to the provinces and territories.

(c) how much money has been spent on procuring the vaccines (i) procured, (ii) delivered, since May 5, 2023, in total and broken down by supplier?

The Public Health Agency of Canada is unable to disclose the precise cost of vaccines by supplier as the information is commercially sensitive and protected under confidentiality clauses in the vaccine supply contracts between the manufacturers and the Government of Canada.

(d) what is the government's estimate on how much it will spend on future purchases of COVID-19 vaccines, in total and broken down by supplier and year, if known?

Federal procurement of COVID-19 vaccines concluded at the end of fiscal year 2024-2025 and responsibility for procurement of COVID-19 vaccines has transitioned to provinces and territories.
