QUESTION

En ce qui concerne les statistiques gouvernementales sur les causes de décès au Canada : a) quelles sont les 50 principales causes de décès pour chaque année et chaque trimestre depuis 2014, ventilées par sexe, fourchette d'âge, lieu géographique des décès, type de lieu où les décès sont survenus (maison de soins de longue durée, hôpital, etc.); b) pour les statistiques en a), à partir de 2021, quelle est la ventilation par statut vaccinal contre la COVID-19?

REPLY / RÉPONSE

ORIGINAL TEXT / TEXTE ORIGINAL ☐ TRANSLATION / TRADUCTION ☒

Veuillez voir l'annexe ci-jointe pour une réponse détaillée de Statistique Canada.

Notes :

Source : Statistique Canada, Base canadienne de données de l'état civil - Décès (BCDECD)

La BCDECD est une enquête administrative qui recueille annuellement et mensuellement des renseignements démographiques et sur les causes de décès auprès de tous les registres provinciaux et territoriaux de l'état civil sur tous les décès au Canada. En cas de décès attribué à la COVID-19, les informations sur le statut vaccinal ne sont pas saisies par ce processus. Par conséquent, nous ne sommes pas en mesure de fournir la ventilation par statut vaccinal demandée à la partie b).

Concernant le lieu du décès :

- « Hôpital » fait référence à un établissement autorisé à fonctionner comme hôpital sous l'égide du gouvernement provincial, territorial ou fédéral.
- « Autre établissement de soins de santé » comprend les maisons de soins infirmiers, les autres établissements de soins de longue durée, les postes de soins infirmiers, les autres établissements de soins de courte durée et les autres établissements de soins de santé non autorisés à fonctionner comme hôpitaux par les gouvernements provinciaux, territoriaux ou fédéral, comme les centres d'accouchement autonomes.

Il existe certaines différences provinciales dans la déclaration des renseignements sur le lieu du décès qui pourraient limiter son utilité :

- Au Québec, les décès dans les centres d'hébergement et de soins de longue durée sont inclus sous « hôpital ». Le Québec utilise « logement privé » pour désigner uniquement le domicile de la personne décédée. Si le décès est survenu à la résidence qui n'était pas la résidence de la personne décédée, il est alors codé comme « autre localité ».
- Depuis 2014, la Saskatchewan ne déclare plus « logement privé »; ces cas sont désormais signalés comme « autre lieu ».

…/2

- Au Nouveau-Brunswick, avant 2016, les décès en salle d'urgence, le décès d'un patient externe et d'un patient décédé à l'arrivée étaient codés comme « hôpital », « autre établissement de soins de santé », ou « autre lieu ». Depuis 2016, ces décès sont codés uniquement comme « autre lieu », seuls les décès à l'hôpital (patients hospitalisés) étant codés comme « hôpital ».
- À compter d'août 2018, les décès enregistrés par le Manitoba où le décès est survenu dans un foyer de soins personnels auront le lieu du décès « autre établissement de soins de santé » au lieu de « hôpital ».

La tabulation des causes de décès est basée sur la cause initiale du décès, qui est définie par l'Organisation mondiale de la santé comme la maladie ou la blessure qui a déclenché la série d'événements menant directement au décès, ou comme les circonstances de l'accident ou de la violence qui produit la blessure mortelle. La cause initiale du décès est choisie parmi les causes et conditions énumérées sur le certificat médical de la cause du décès rempli par un professionnel de la santé, un médecin légiste ou un coroner.

La liste de classement des principales causes de décès utilisée dans ce tableau est basée sur la liste des 51 causes classables qui a été élaborée et qui a été utilisée par le National Center for Health Statistics des États-Unis dans son rapport annuel sur les principales causes de décès. L'ordre des principales causes est déterminé par le nombre de décès.

La catégorie « Autres causes de décès (pas de rang) » est une catégorie résiduelle de toutes les causes de décès inclassables.

Les données pour le Yukon n'ont pas été reçues par Statistique Canada pour les années de référence à partir de 2017.

Les chiffres pour les années de référence 2014 à 2016 sont basés sur les données de la BCDECD révisées publiées en janvier 2020.

Les chiffres pour les années de référence 2017 à 2020 sont basés sur des ensembles de données révisés et préliminaires publiés en janvier 2022.

Les chiffres pour les années de référence 2021 et 2022 sont basés sur les ensembles de données provisoires publiés le 11 mai 2023. On estime que les chiffres fournis pour 2021 et 2022 représentent respectivement 99,9 % et 96,3 % des décès survenus au cours de ces deux années. Cependant, parmi les décès qui ont été signalés à Statistique Canada, les causes de décès n'ont pas été déclarées ou sont en attente d'une enquête par un coroner ou un médecin légiste pour environ 6 % des décès survenus en 2021 et 25 % des décès survenus en 2022 (et 47 % des décès survenus au quatrième trimestre de 2022). L'absence de ces informations affecte certaines juridictions plus que d'autres. Les diminutions du nombre de décès attribués à une cause particulière pour ces années par rapport aux années/trimestres précédent(e)s doivent être interprétées avec prudence.

Les données reçues des provinces et des territoires sont insuffisantes pour fournir les statistiques du 1er trimestre de 2023.

Tous les chiffres ont été arrondis au hasard à un multiple voisin de 5 conformément aux pratiques de contrôle de la divulgation de la BCDECD.

Q-1520

Q-1520[2] — 5 mai 2023 — Mr. Carrie (Oshawa) — En ce qui concerne les statistiques gouvernementales sur les causes de décès au Canada : a) quelles sont les 50 principales causes de décès pour chaque année et chaque trimestre depuis 2014, ventilées par sexe, fourchette d'âge, lieu géographique des décès, type de lieu où les décès sont survenus (maison de soins de longue durée, hôpital, etc.); b) pour les statistiques en a), à partir de 2021, quelle est la ventilation par statut vaccinal contre la COVID-19?

NOM DE L'ORGANISATION : Statistique Canada (StatCan)

Nombre trimestriel de décès, selon la province ou territoire et les principales causes de décès, Canada, 2014 à 2022				
Année	**Trimestre**	**Lieu du décès, province ou territoire**	**Principales causes de décès**	**Nombre de décès**
2014	Total annuel	Terre-Neuve-et-Labrador	Total, toutes causes of de décès	4,980
2014	Total annuel	Terre-Neuve-et-Labrador	Tumeurs malignes	1,465
